About Me

I am a passionate aviation enthusiast dedicated to promoting safety and satisfaction through exceptional service. With strong technical skills in aviation systems, safety protocols, and operational procedures, I excel in time management, problem-solving, and teamwork. I am eager to contribute to an ambitious aviation company that offers genuine opportunities for growth and progression.

Skills

- Aircraft Maintenance
- Time management
- Teamwork
- ANALYTICAL SKILLS
- Problem solving
- Avid learner
- Interpersonal Skills

Experience

Aircraft Maintenance Attache'

2022

Kasas limited

- Performed Basic Maintenance Tasks: Assisted with routine maintenance such as inspections, repairs, and replacements of aircraft components under supervision.
- On-the-Job Training (OJT): Gained hands-on experience in performing aircraft systems checks, troubleshooting, and preventive maintenance.
- Shadowed Certified Aircraft Engineers: Observed and supported experienced engineers in more complex tasks such as engine diagnostics, hydraulic system maintenance, and avionics inspections.
- Assisted in Aircraft Ground Handling: Participated in ground operations including refueling, aircraft towing, and system pre-flight inspections.
- Followed Safety and Compliance Protocols: Ensured all work was completed in compliance with safety regulations and company standards.
- Documentation and Reporting: Assisted in maintaining detailed maintenance logs, service records, and aircraft status updates.
- Multi-disciplinary Exposure: Worked in various departments including maintenance, operations, and logistics to develop a broad understanding of the aviation industry.
- Familiarity with MRO Software: Learned to use Maintenance, Repair, and Overhaul (MRO) software to track work orders and aircraft maintenance schedules.
- Collaborated with Engineering Teams: Supported team projects focusing on improving maintenance processes, project management, and risk assessments.
- Participated in Networking Activities: Attended workshops and networking events to build professional relationships and expand knowledge of the industry.

Education

Diploma in Aeronautical Engineering-airframes

2020-2023

and engines option

East African School of Aviation

This course focuses on aircraft structures and propulsion systems. It provides hands-on training in the maintenance, repair, and inspection of airframes and engines, preparing graduates for careers in aviation maintenance and ensuring adherence to safety standards.

Software Development

2024-present

Power Learn Project

This program provides a strong foundation in programming, software design, and system analysis. It covers coding languages, database management, and application development, with practical training in building, testing, and deploying software solutions. Graduates are equipped for careers in software engineering, web development, and IT support.
